

### White clover

The ideal variety for a combination of grazing and cut.

#### Aggressive growth

MILO has medium to large leaves with a strong and erect growth- perfect partner for more aggressively growing grasses.

#### High summer production

MILO is early in spring growth and with a yield equally distributed over the summer period.

#### The best winter-hardiness

MILO is listed in Switzerland, among other countries, and has proved the very best winter-hardiness.

#### Excellent Resistance to Diseases and Nematodes

The main disease and pest of white clover is sclerotinia and nematodes. Milo has a high resistance to both.

- Aggressive growth
- High summer production
- Best winterhardiness
- Excellent disease resistance

Variety:	Spring growth:	*Yielding capacity:	Cold resistance:	Persistence:
HUIA	Rapid	Very good	Above average	Average
MENNA	Rapid	Very good	Above average	Average
MILO	Rapid	Very good	Good	Above average
