

LAURA

Festuca pratensis

Meadow fescue

Yield	Persistence	Winterhardiness	Digestibility
■ ■ ■ ■ ■	■ ■ ■ ■ ■	■ ■ ■ ■ ■	high

Growing characteristics

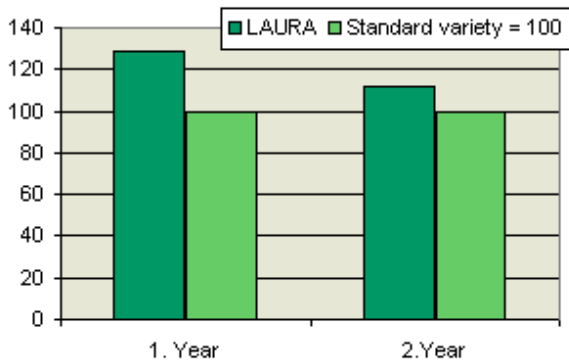

LAURA establishes very quickly which makes it very competitive with perennial ryegrass. The first cut yields are very high combined with an excellent leafy regrowth in the aftermath. Therefore LAURA has high yields of very digestible drymatter in all cuts. Because of the very leafy regrowth of this variety it is also very suitable for grazing or a combination of cut and grazing managements.

The use of Laura

The use of meadow fescue is especially recommended in cold and wet areas. LAURA has proven a very good persistence in Austria with high yields also in 5-6 years leys. This tells about the very fine winter hardiness and aggressiveness of the variety.

- Very productive
- Early spring growth
- Persistent
- Even productivity over the growing period

Results from Danish trails

Source: Drymatter yield rel. (100=12.880 kg/ha in the 1st year and 11.170 kg/ha in the 2nd year.)
